## SUMMARY

I'm a dedicated junior Full Stack developer on a mission to translate ideas into captivating digital experiences. Proficient in HTML, CSS, JavaScript, and Java, with hands-on experience in React.js and Node.js, I specialize in crafting responsive and user-friendly interfaces. I constantly improve my knowledge of the latest industry trends and technologies. My collaborative nature and effective communication skills make me an asset to any dynamic team.

## EMPLOYMENT

**Mr. Rocky Jagtiani** · *Front End Developer Intern*
During this internship, I gained hands-on experience with various front-end technologies. Leveraging these skills, I developed a sophisticated e-commerce application using Next.js and successfully deployed it on Vercel.

## EDUCATION

| | |
|---|---|
| **FRONT END SKILLS** | HTML, CSS, JavaScript, NextJS, ReactJS, TypeScript, TailWindCSS |
| **BACK END SKILLS** | MongoDB, NodeJS, ExpressJS, MySQL |
| **PROGRAMMING SKILLS** | Java |

## PROJECTS

**E-commerce (E-Shop) App built with NextJS**
E-commerce app made with Next 13, Sanity and Stripe. This project has every major feature you would expect from a modern e-commerce app, such as an attractive and accessible user interface, a powerful shopping cart, where customers can add, update and remove items from their cart, the ability to sort products by different criteria.

**Notepad-clone built using Java Swing**
This application is a Notepad Clone in which the user inputs text by writing with styles on the screen. We can Save, Print, Copy, Paste any text which we want.

**Blog App using MERN**
This app will allow users to write their own stories and the data is stored in a database. The backend language used for this is node.js, express and mongoDB and the frontend being used is React

**Podcast Summary Application built with AssemblyAI**
This project aims to automate the process of summarizing podcasts using Assembly AI. making it convenient for users to quickly grasp the key points of lengthy audio content
